algorithms exposed

Claudio Agosti - Transmediale 2019

<https://facebook.tracking.exposed>

**Tracking
Exposed**

Algorithms are a political issue

But because of their invisible and technical nature,
it is hard make them in a compelling narrative

1. Someone posts content to Facebook

(it can be you, or a bot, your friend, an advertiser...)

2. Facebook black-box attribute metadata

(but algorithms are secrets, we can only guess what they do)

- text analysis
- links content
- few options you control (location, mentions, visibility)

-
- *who are the other connected at the same wifi*
 - *probably a lots of stats we can't understand, such as emotions?*

Experimental evidence of massive-scale emotional contagion through social networks

Adam D. I. Kramer, Jamie E. Guillory, and Jeffrey T. Hancock

PNAS June 17, 2014 111 (24) 8788-8790; published ahead of print June 2, 2014 <https://doi.org/10.1073/pnas.1320040111>

Edited by Susan T. Fiske, Princeton University, Princeton, NJ, and approved March 25, 2014 (received for review October 23, 2013)

This article has corrections. Please see:

Editorial Expression of Concern: Experimental evidence of massive-scale emotional contagion through social networks

Caryn Vainio

@Hellchick

Follow

For those of you who work in social media, I need to share the story of my friend who died, and I didn't know because algorithms.

1:05 PM - 18 Dec 2017

3. Someone logs in to Facebook.

Facebook looks at the
*profile they
have on you*

- what you liked, friends, pages
- your settings

-
- *something your friends made*
 - *what is happening in your area/region*
 - *what is happen from the same ip address*
 - *your behavior tracked across multiple websites/apps*

4. facebook decides

It serve an *ephemeral timeline*

In this account, I follow 143 users and 39 pages

I have not connected since yesterday.

Let's estimate: where only 100 new posts were waiting for me?

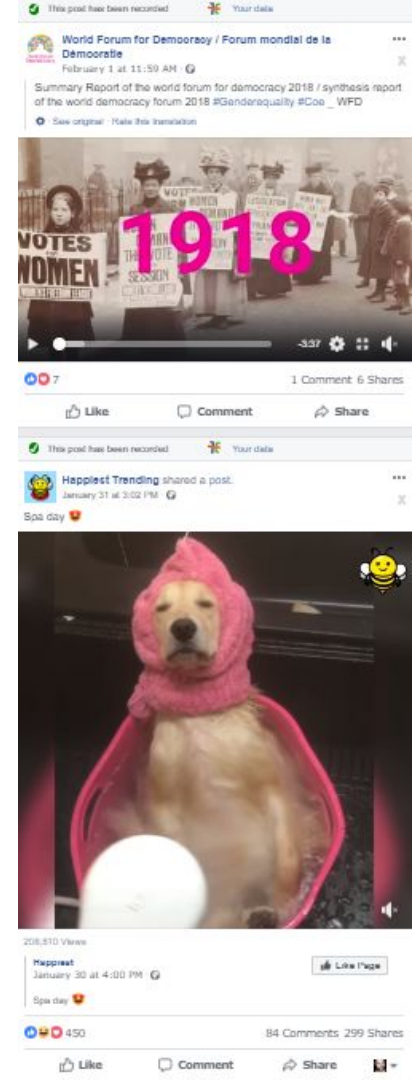

This is the **content prioritization**

Or, personalization algorithm

Or, the invisible curation of content

And, overall, power

By comparing accounts, we hypothesized we could catch discrimination when it happens. We made six profiles:

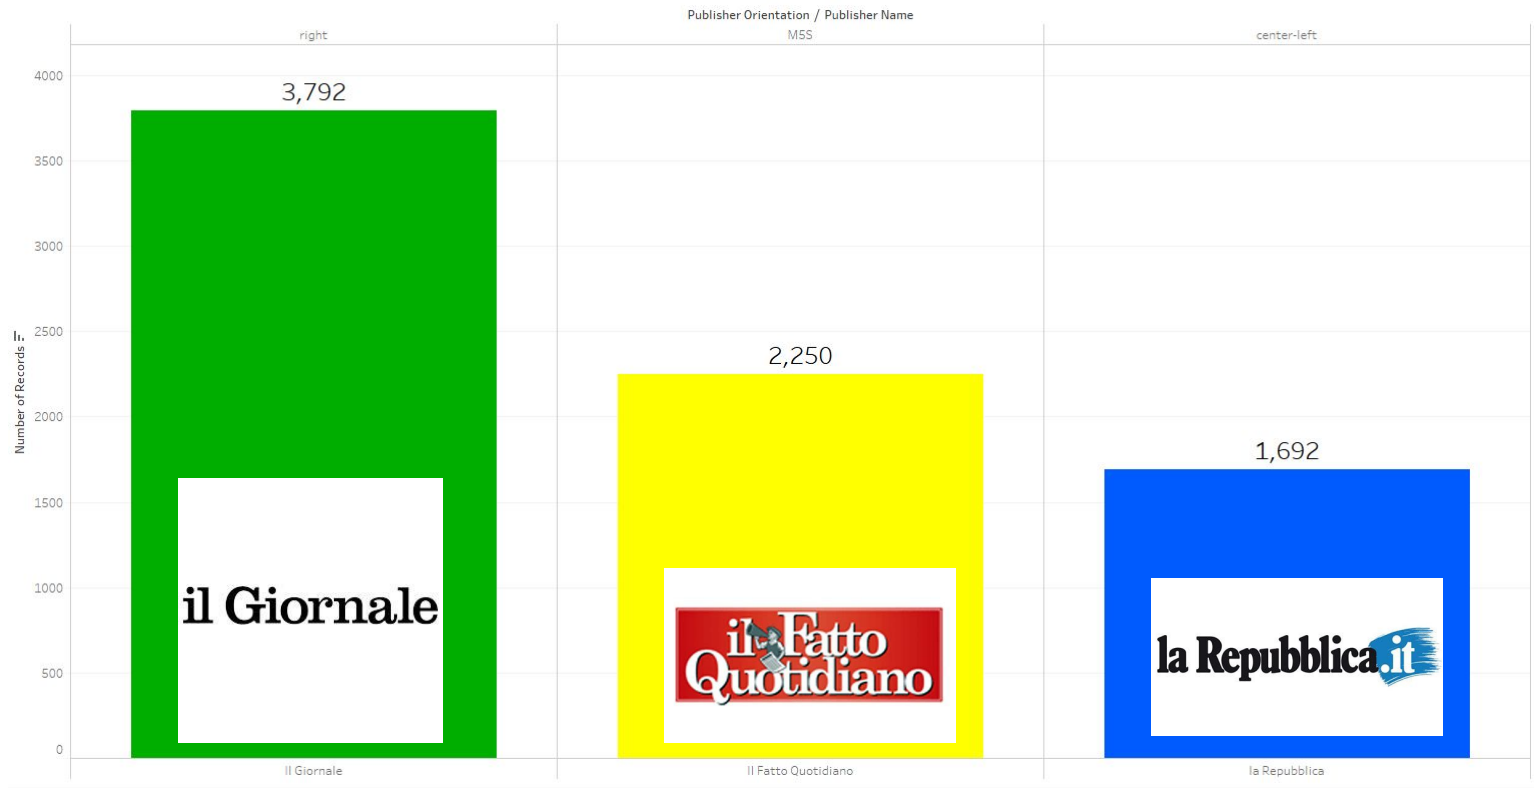

- follow the same pages (such as the three newspaper)
- access at the same time per day
- have zero friends
- like different content
